Piranhas live in enormous packs, or shoals. They spend most of their time hunting for food. Rivers are their primary **habitat** although, as a result of massive flooding, they many occasionally find their way into lakes. But it is thought that they are unable to breed outside of rivers. Piranhas have **voracious** appetites, and they seek river locations that have plentiful fish supplies. They are found in any **well-stocked** river within their natural habitat.

The piranha hunts with speed and **by surprise**. The typical way in which the piranha attacks is by swimming directly into a shoal of fish. The attacked shoal scatters in all directions, and the piranha quickly overpowers individual fish. Small fish are swallowed whole. Larger prey have chunks ripped out of **them**, which the piranha swallows instantly so it can immediately take another bite.
